Zephyr Adaptors*

Zephyr Truss Adaptor

NEXUS ADAPTABILITY

Your Nexus Teton or Grand Teton quonset greenhouses can be converted into a naturally ventilated Zephyr style range with the use of a Zephyr truss adaptor. The economical and easy to bolt-on conversion updates your range to a state-of-the-art naturally ventilated greenhouse without the issues of a new construction project. Just as the versatile Nexus truss design adapted to different roof coverings, the same flexible engineering design allows for venting and cooling upgrades.

ZEPHYR VENTING - PEAK PROFITS

By definition a zephyr is a gentle breeze. The **Nexus Zephyr™** is a proven cost-effective solution for natural ventilation because it offers the grower a gentle breeze to help optimize growing conditions. In these economic times an efficient, naturally ventilated house can cut your operating costs without a large capital investment.

VERTICAL VENTING — FAR SUPERIOR

The **Zephyr** vent offers an improved cooling solution to an old problem by the use of efficient vertical ridge vents at the peak. In the **Zephyr**, hot air escapes at the highest point in the greenhouse, not at the lower gutter area as in a wing design. Top ridge vents allow for dehumidification and ventilation even when snow is in the gutters. The **Zephyr's** vertical vent design protects your crops from heavy rains and minimizes the risk of losing vents in the roof from high winds. Also, insect screens install in a snap.

FLEXIBILITY BY DESIGN

Vent options include: drop down curtains and single or twin wall polycarbonate covered Atrium style vents. Roof covering options are: rigid covering or double-poly with the option of adapting to a rigid cover later.

NEW SIDE VENTILATION OPTION

Along with our standard venting options of drop curtains or rack and pinion vents for the sides and ends, Nexus can supply our new EDDG vent. The EDDG vent is a drop down exterior guillotine vent that gives the owner the option of a clear vent opening incremented to the desired dimension. The vent can be covered with single or double wall polycarbonate or single or double polyethylene. Ask your **Nexperts** about the EDDG vent to give you an “edge” over the traditional vent option.

NEXPERTS HELP WHEREVER NEEDED

Nexus Corporation has three manufacturing plants: Pana, IL; Darlington, SC; and Northglenn, CO. We support you with **Nexperts** regionally located throughout the U.S. In addition to your structure needs, they will advise you on our complete line of engineered benching, environmental controls and other accessories. The result: a complete greenhouse system.

So, for maximum versatility and natural ventilation, call us and discover how our **Zephyr** venting can help your business grow and grow.
